

TECHNICAL DIRECTOR

Marco Leliveld has been engineering and supplying castings and forgings since 1989. He started his career as sales engineer at Prins Metallurgische Producten B.V., at that time a small trading company in The Netherlands, but was then soon discovered by a leading French Steel and S.G.-Iron foundry in the Ardennes, Fonderies Collignon S.A., who hired him as export sales director to develop export markets outside of France, mainly in the automotive sector. In this foundry, Marco achieved a thorough knowledge of the do's and don'ts in castings.

From 2002-2010 Marco was Commercial and Technical Director of Prins Metallurgische Producten B.V. Under his management, this company was highly professionalized and made very profitable, which led to a friendly takeover by Penguin Ventures in 2008.

Over the last years, Marco has made more than 50 business trips to Chinese foundries and forging companies, to develop and control quality metal parts for leading European O.E.M. customers.

Marco can also be hired to solve complex metallurgical or dimensional problems in castings or forgings all over the world.
